

High polymer fishtape **GREEN TWISTY**

CODE: GREEN TWISTY

Fish tape in polymer plastic material, selflubricating, with special "single spiral" section, diameter 3 mm.

Able to reduce friction, as it reduces to the minimum the contact surface of the fish tape with the walls of the pipe to be drawn, or with the cables already in the duct. Furthermore, single wire construction increases stiffness.

The terminals are M4 threaded brass and allow easy interchangeability of the ferrule and terminal.

The brass components are with reduced thickness for maximize the fish tape performances.

Features

- Ø 3 mm.
- Ideal for threading in small diameter pipes: 20-25 mm
- shiny green color
- with interchangeable tip and pull rod
- no electrical conductivity
- high flexibility
- great pulling power
